

Post-Doctoral Fellowship position in the Kulkarni Lab at [Joslin Diabetes Center, Harvard Medical School](#). One position is available immediately for a period of 3 years each. Applications are invited from individuals with a PhD or MD or MD PhD degrees. Candidates with expertise in **Bioinformatics** will be especially relevant. Prospective candidates should have expertise in handling large 'omics' databases and be willing to work closely with other Fellows in the lab to assist in analyses of biological data from diverse projects focused on Metabolism. These include but are not restricted to defining pathways and identifying mechanisms that regulate pancreatic (endocrine and exocrine) biology and inter-organ cross-talk in the overall maintenance of glucose homeostasis. Other projects include induced pluripotent stem cells, genetically engineered and humanized mouse models. Candidates will also be encouraged to develop their own research interests. Applicants for the position should provide a brief statement of research interests, CV, and the names of three references to [Dr. Kulkarni](#).
