

Postdoctoral Fellow/Staff Scientist

The Wagner lab at the Broad Institute is looking for an energetic researcher interested in studying the role of ubiquitination in beta-cell apoptosis. We use techniques in basic biology, chemical biology, high-throughput screening, and many other areas. It's a great opportunity to learn about cutting-edge technologies while studying an exciting emerging area in beta-cell biology.

Candidates should have a strong record of productivity and publication in islet biology or chemical biology. Interested applicants should send a letter, CV, and contact information for 2-4 references to bwagner@broadinstitute.org.
