

A iPS Core Manager position is available at the Kulkarni Lab at Joslin Diabetes Center, Harvard Medical Center. The Core Manager will set up the infrastructure, equipment and supervision of the functionality of generating human iPS cells from patient samples in the long-term goal of generating insulin-secreting beta-like cells for testing in ex vivo and in vitro studies. This role will primarily be responsible for supervising the laboratory as well as having the expertise to undertake hands-on work if necessary, to insure timely progress of the projects. Applicants for the position should provide a brief statement of research interests, CV and the names of three references to Dr. Kulkarni.
